

SOLUTIONS THAT MATTER. HEALTH CARE THAT WORKS.

WHAT'S DRIVING HIGH HEALTH CARE SPENDING AND HOW DO WE FIX IT?

Health Policy Institute of Ohio Forum

Ani Turner, Center for Value in Health Care, Altarum

August 23, 2018

Key takeaways

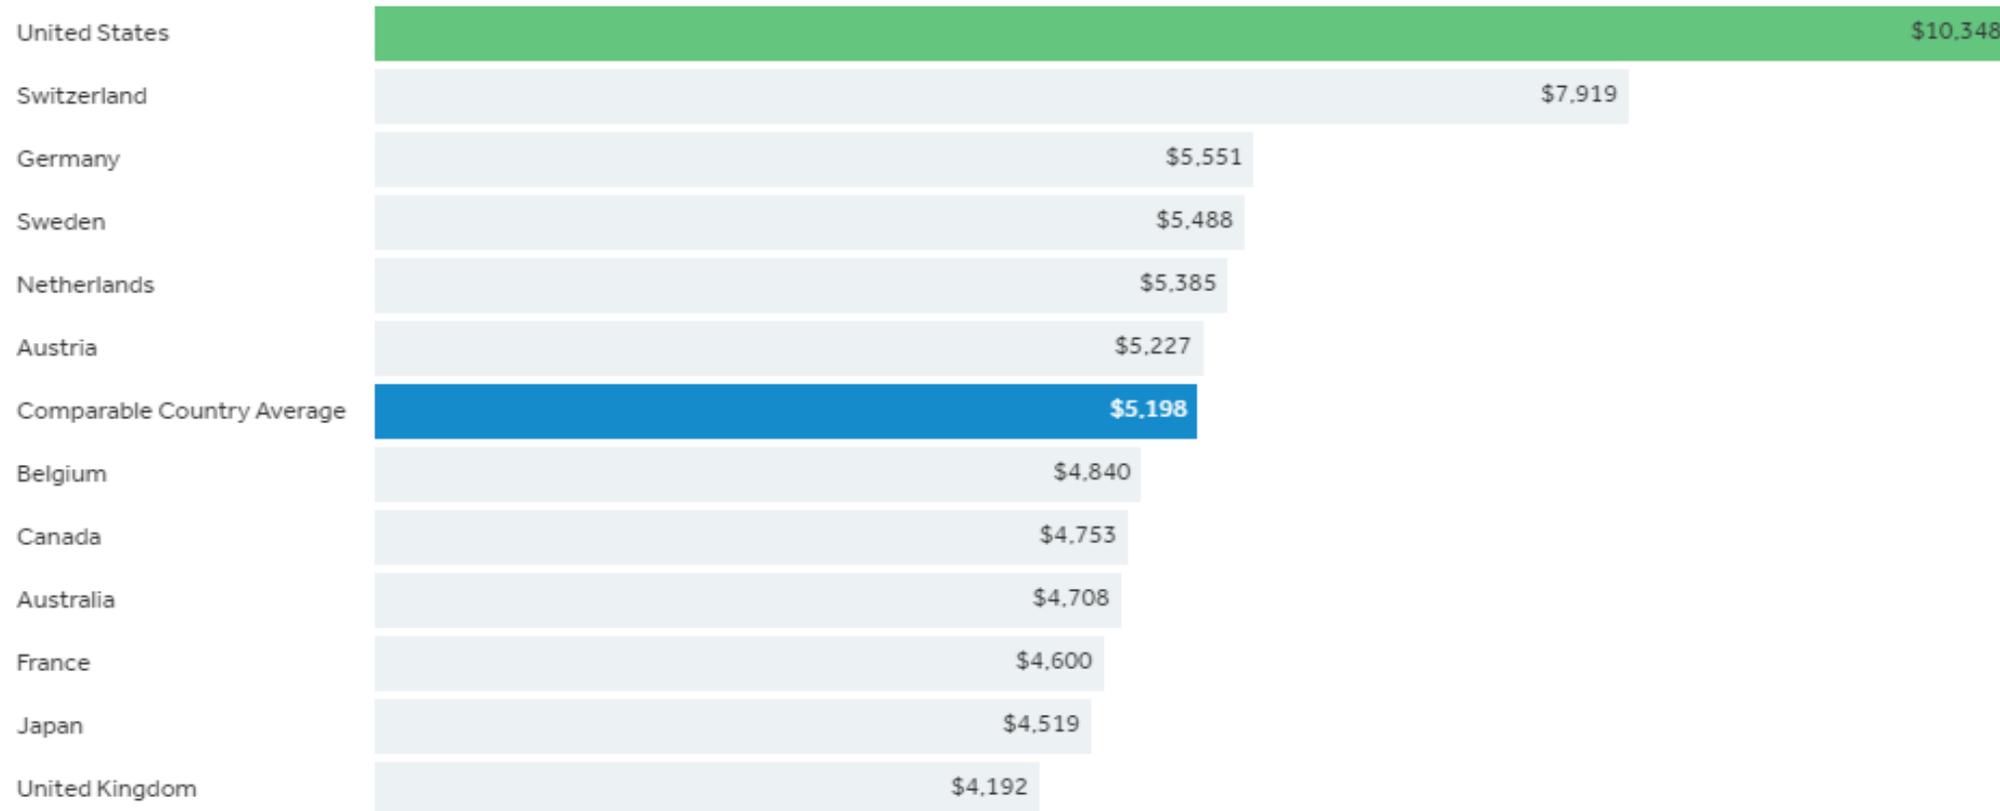

1. U.S. leads the world in health care spending – a problem because it's crowding out other priorities, constraining wage growth, and *not producing better health*.
2. We spend more on health care without better health because we pay *higher prices* for drugs and services, make greater use of medical technology, and *invest less in social services* that may be more fundamental to good health.
3. Policy approaches are needed to both *align incentives* and *spread tools and methods* for lowering spending while maintaining health outcomes.

U.S. spends double per person on health care

Total health expenditures per capita, U.S. dollars, PPP adjusted, 2016

Source: Source: U.S. data are from the 2016 National Health Expenditures Account. Comparable country data are from OECD (2017), "OECD Health Data: Health expenditure and financing: Health expenditure indicators", OECD Health Statistics (database). DOI: 10.1787/health-data-en (Accessed on March 19, 2017) • Get the data • PNG

Why is our high health care spending a problem? ▲

- ▲ With two-thirds of health spending publically funded, health spending is crowding out education and other priorities, especially at the state level.
- ▲ For the half of the population with employer-sponsored insurance, rising premiums are a bigger share of compensation, constraining wage growth.
- ▲ As our population ages, health care spending threatens federal and state fiscal outlooks (10K new Medicare enrollees per day).
- ▲ We are not getting good value for our spending: U.S. spends much more on health care, yet has poorer health and lacks universal coverage.

U.S. life expectancy is lowest of peer nations

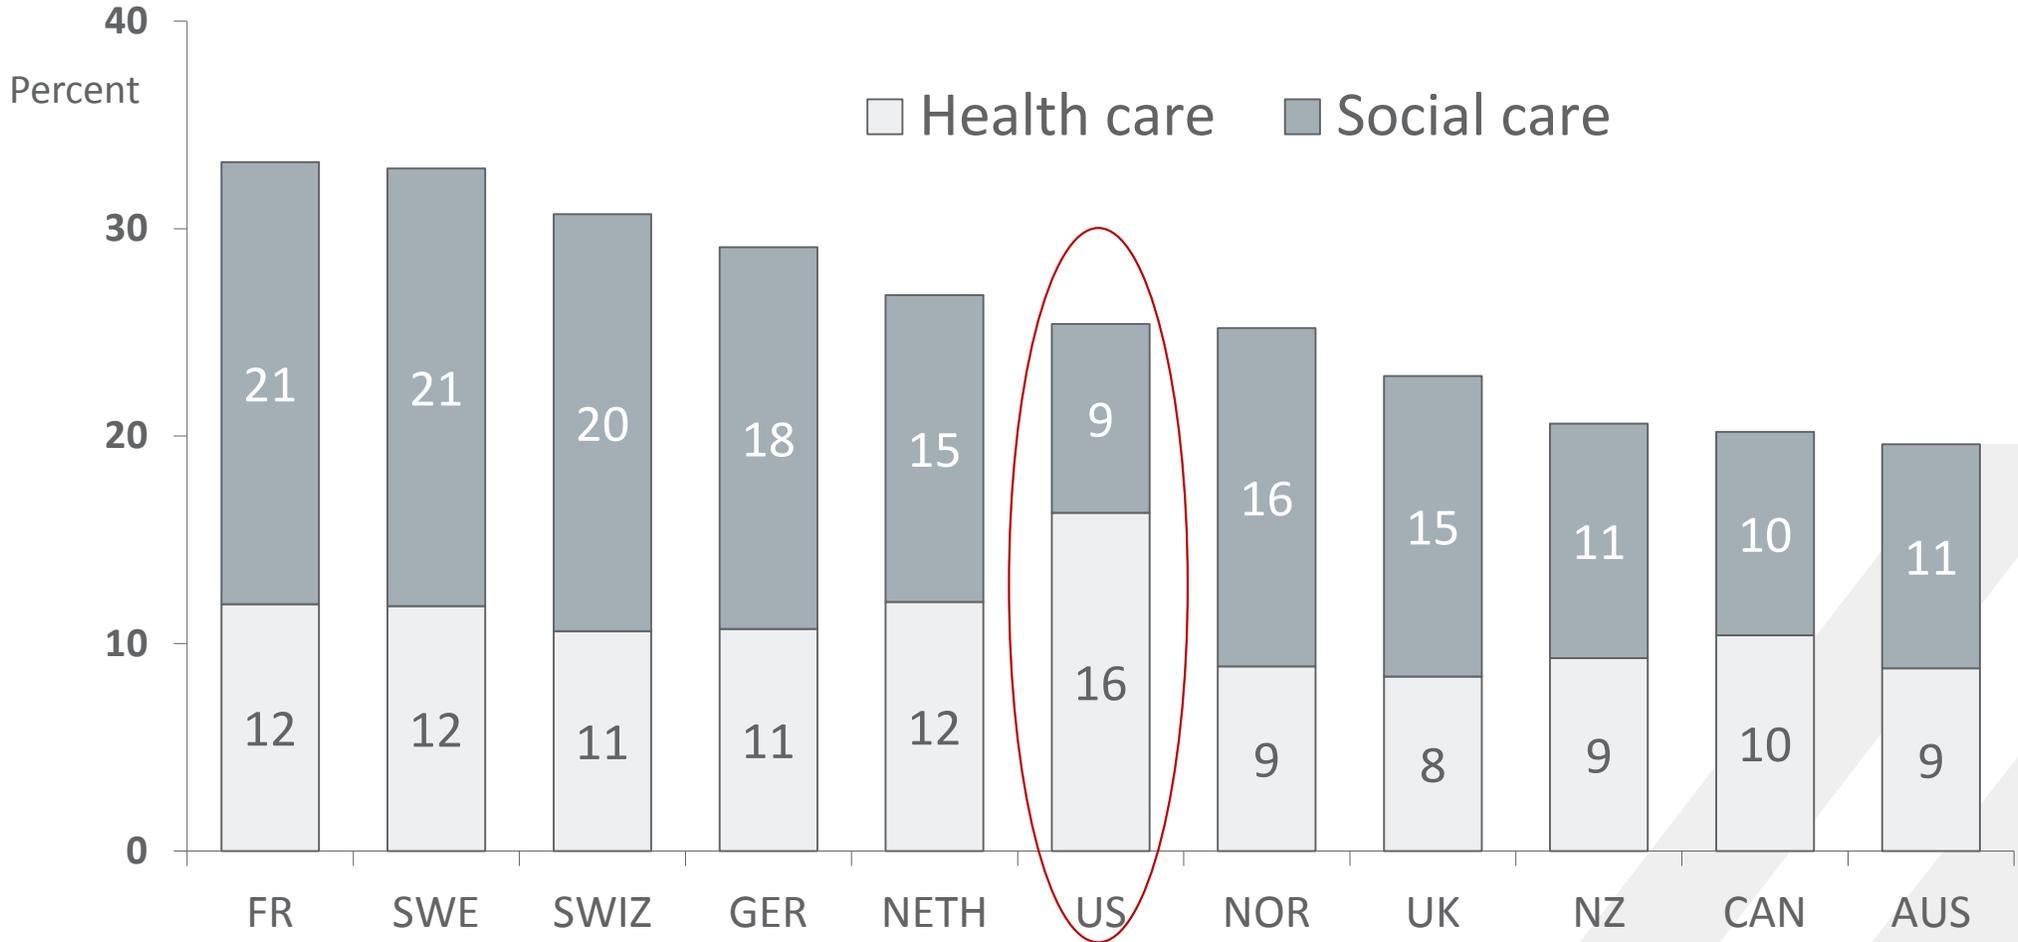

Life expectancy at birth in years, 2015

Note: Data for Canada are for 2013

Source: Kaiser Family Foundation analysis of data from OECD (2017), Life expectancy at birth (indicator) (Accessed on November 13, 2017). • [Get the data](#) • [PNG](#)

For better health, spend more on social services? ▲

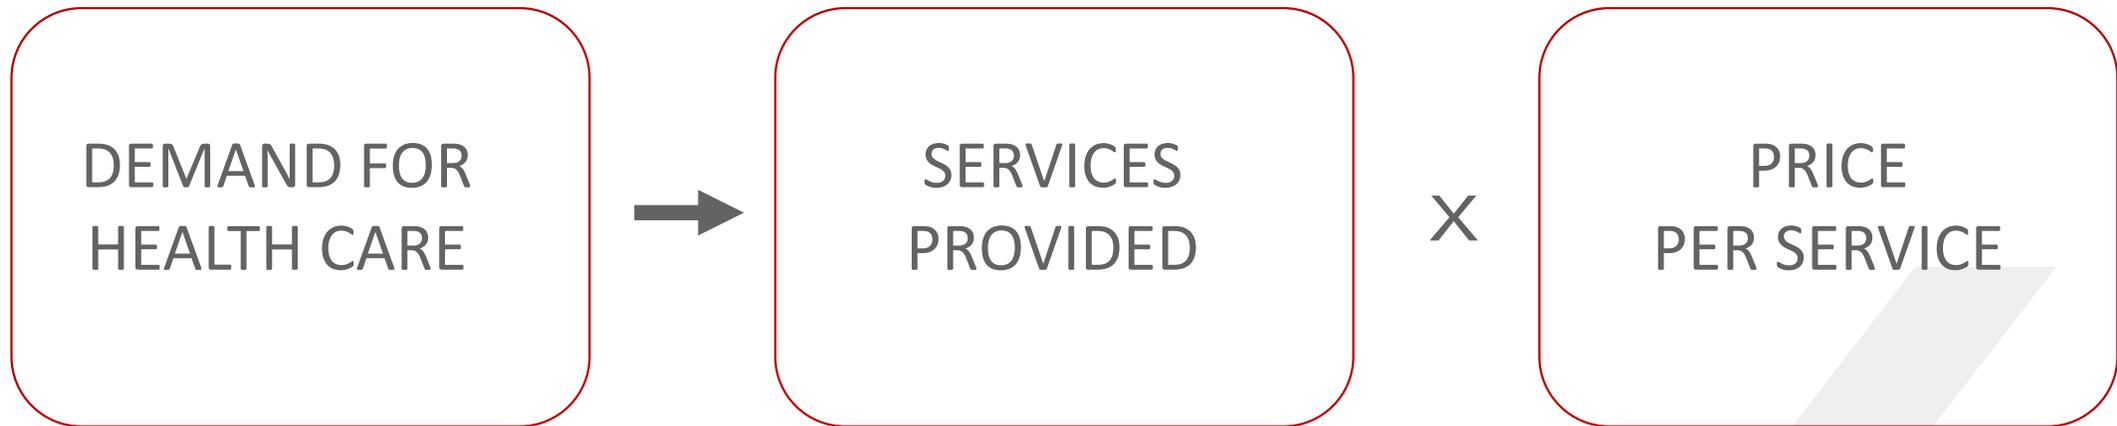

Notes: GDP refers to gross domestic product.

Source: E. H. Bradley and L. A. Taylor, *The American Health Care Paradox: Why Spending More Is Getting Us Less*, Public Affairs, 2013.

The COMMONWEALTH FUND

What drives health care spending?

- ▲ Health status
- ▲ Access to care

- ▲ Supply capacity
- ▲ Practice patterns

- ▲ Unit prices paid

U.S. population less healthy than peer nations

Lower rates of:

- ▲ Smoking per person
- ▲ Alcohol intake per person

But higher rates of:

- ▲ Lung cancer and alcohol abuse disease burdens
- ▲ Obesity (38% vs 20%)
- ▲ Violence, accidents, suicide, drug overdose/poisoning

Source: Rabah Kamal, Cynthia Cox and Erik Blumenkranz, "What do we know about social determinants of health in the U.S. and comparable countries?", Kaiser Family Foundation, Peterson/Kaiser Health System Tracker, November 21, 2017

Americans have less financial access to care

Percent of total population covered by private and/or public health insurance, 2016 or nearest year

Note: 2016 data shown for the U.S., Australia, Canada, France, and Sweden.

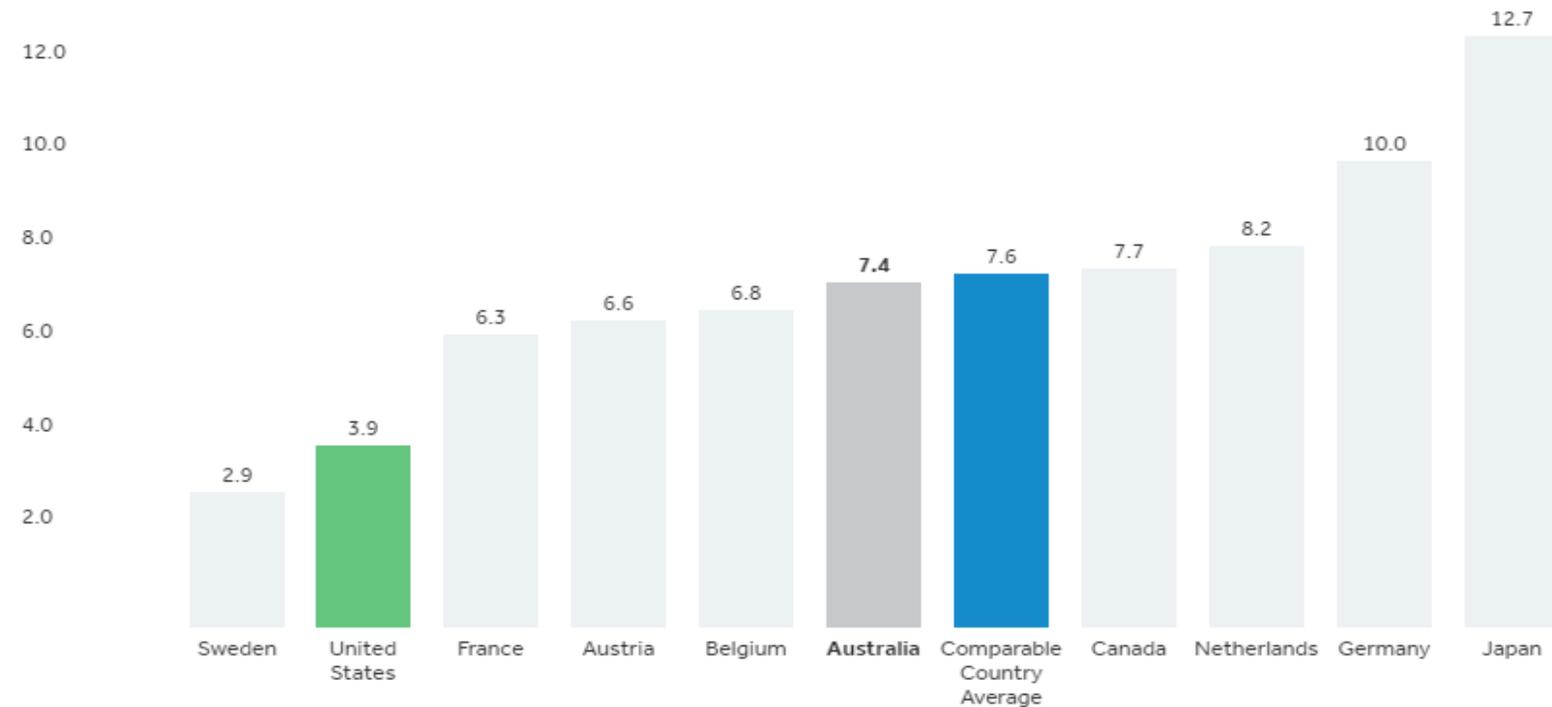

Source: Kaiser Family Foundation analysis of data from OECD (2018), "Social protection", OECD Health Statistics (database) (Accessed on 25 January 2018) for comparable countries and U.S. Census Current Population Reports for the United States. • [Get the data](#) • [PNG](#)

Overall, U.S. utilization rates are not high

The U.S. has fewer physician consultations per capita than most comparable countries

Doctors consultations, per capita, in all settings, 2015

In cases where data were unavailable, data from the countries' closest available year are shown. Data not available for the United Kingdom and Switzerland.

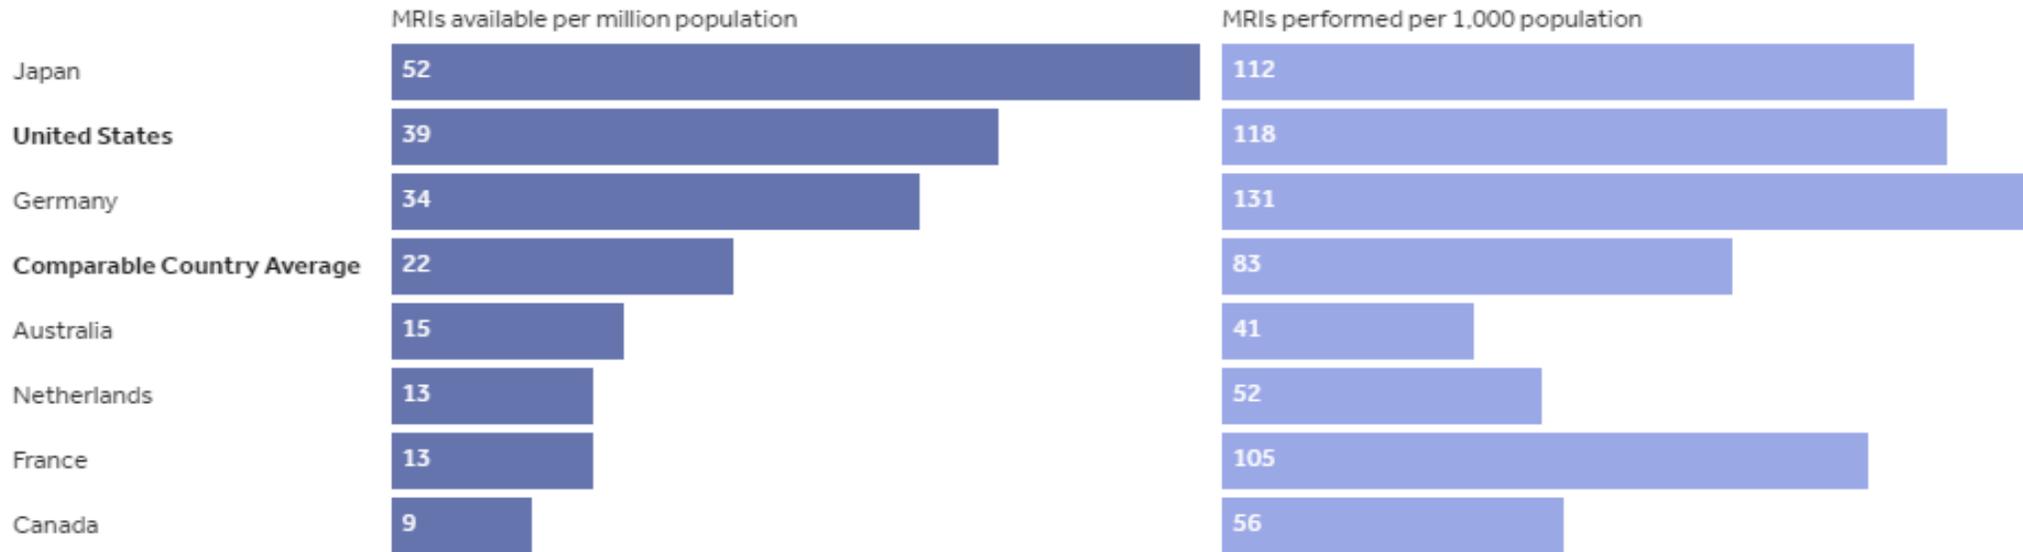

Source: : Kaiser Family Foundation analysis of data from OECD Health Statistics and the AHRQ Medical Expenditure Panel Survey (Accessed on 31 January 2018). • [Get the data](#) • [PNG](#)

Although we use more medical technology

The U.S. leads most comparable countries in MRI availability and use

Number of MRI units available per million population, 2015; Number of MRI exams performed per 1,000 population, 2015

Notes: In cases where 2015 data were unavailable, 2014 data are shown. Austria and the United Kingdom are omitted because data are not available for both indicators. Data not available for Sweden and Switzerland.

Source: Kaiser Family Foundation analysis of data from OECD (2018), "OECD Health Data: Health care resources", OECD Health Statistics (database) (Accessed on January 31, 2018). • Get the data • PNG

Prices appear to be main driver of high spending ▲

	Total hospital and physician costs, 2013 ^a		Diagnostic imaging prices, 2013 ^a		Price comparison for in-patient pharmaceuticals, 2010 (U.S. set to 100) ^b
	Bypass surgery	Appendectomy	MRI	CT scan (abdomen)	
Australia	\$42,130	\$5,177	\$350	\$500	49
Canada	—	—	—	\$97	50
France	—	—	—	—	61
Germany	—	—	—	—	95
Netherlands	\$15,742	\$4,995	\$461	\$279	—
New Zealand	\$40,368	\$6,645	\$1,005	\$731	—
Switzerland	\$36,509	\$9,845	\$138	\$432	88
United Kingdom	—	—	—	—	46
United States	\$75,345	\$13,910	\$1,145	\$896	100

^a Source: International Federation of Health Plans, 2013 Comparative Price Report.

^b Numbers show price indices for a basket of in-patient pharmaceuticals in each country; lower numbers indicate lower prices. Source: P. Kanavos, A. Ferrario, S. Vondoros et al., "Higher U.S. Branded Drug Prices and Spending Compared to Other Countries May Stem Partly from Quick Uptake of New Drugs," *Health Affairs*, April 2013 32(4):753–61.

The
COMMONWEALTH
FUND

Are prices high because they need to be, or because they can be?

▲ High input costs

- High administrative costs (15% versus OECD 5%)
- High wages (clinicians, nurses, administration)
- Investments in medical technology, facilities to compete
- High drug development costs

▲ Limited ability to constrain prices

- Private payer prices depend on competition, consolidation
- Public payer price controls depend on access concerns, political will

Policy approaches need both “how” and “why” ▲

- ▲ Effective tools and strategies to lower costs of treatment and reduce spending, while maintaining health outcomes
- and
- ▲ Better aligned and stronger incentives for consumers, providers, payers to be motivated to reduce spending

Who has an incentive to reduce spending?

▲ Patients?

- Don't usually see a price until after service is received
- When ill and in need, may not be in a position to shop for care
- May defer to clinician's expertise and guidance
- May want to make full use of their health care "benefit"

▲ Providers?

- Often don't know price of services
- Often are paid more for providing more – no financial downside
- May be motivated to do more to protect against liability
- May face pressure from patient to do something

-- continued

Who has an incentive to reduce spending?

▲ Private insurers?

- Can pass along higher costs in premiums
- May compete more on access to desired providers than cost
- May face backlash if payment for drug or service is denied
- Face increasing provider consolidation, weakening insurer bargaining power

▲ Government payers?

- Must overcome political pressure from providers and beneficiaries
- May be legally limited in ability to say “no” based on price/value
- Must overcome differing ideologies on role of government, freedom of market, “right” to health care

Policies to align incentives

1. Payment models or policies that incentivize efficiency and outcomes
 - Bundled payments, capitation
 - Readmission penalties, value-based purchasing more broadly
2. Coverage policies that incentivize patients to choose better value care
 - Reference pricing
 - Tiered pharmacy benefits
 - Value-based insurance design
3. Constraints on prices or price growth
 - All-payer rates (Maryland)
 - Site neutral payments
 - Restraints in price growth for public payments (ACA productivity adjustment)
4. Budget constraints (Maryland) or growth targets (Massachusetts)

Strategies to reduce spending and improve value ▲

1. Reducing “non-value-added” care (harmful, ineffective, or overused services)
2. Removing barriers (licensure, reimbursement) to full productivity of all members of the health care team and to the use of technology solutions such as telemedicine
4. Applying process improvement techniques such as Lean/Six Sigma
5. Communication, respect, relationship between providers and patient
6. Improving transparency on prices and quality, with appropriate comparisons among providers and geographies
7. Investing in upstream determinants of health, including public health, housing, early childhood, education, and safe and healthy physical environments

A Framework for Thinking about Healthcare Value Strategies

Value Strategies	What's the Intervention?	Who's the Initial Target?
------------------	--------------------------	---------------------------

IMPROVING Population Health	<ul style="list-style-type: none"> • Community Infrastructure that Supports Health • Public Prevention Programs • Regulatory Action • Sin Taxes 	
---------------------------------------	---	--

REVEALING What We Pay and What We Get	<ul style="list-style-type: none"> • Price Transparency • Provider Quality Reports • Shared Decision Making/Patient Activation • Disclose Conflicts of Interest • Improve Comparative Information about Health Plans • Health Plan Rate Review • All-Payer Claims Datasets • Comparative Effectiveness Research 	
---	---	--

CHANGING How We Pay and What We Get	<ul style="list-style-type: none"> • High-Deductible Health Plans/Health Savings Accounts • Wellness Incentives • Drug Formulary Design • Value-Based Insurance Design • Reference Pricing • Narrow/Tiered Provider Networks/Selective Contracting • Value-Based Purchasing/Pay for Performance (P4P) • Hospital/Physician Rate Setting • Foster Provider Competition 	
---	--	--

Healthcare Value Strategies (continued)

Value Strategies	What's the Intervention?	Who's the Initial Target?
------------------	--------------------------	---------------------------

CHANGING How We Pay and What We Get	<ul style="list-style-type: none"> • Bundled Payments • Capitation • Global Budgets • Certificate of Need/Determination of Need • Competitive Bidding • Address Fraud and Abuse • Foster Health Plan Competition • Public Option • Medical Loss Ratio • Limit Tax Breaks for Employer-Provided Coverage • Generic Pathway for Biologics 	
---	--	--

ORGANIZING Care Delivery Differently	<ul style="list-style-type: none"> • Reduce Medical Harm • Chronic Care Management • Case Management • Coordinated Care for Complex Cases • Medical Homes • Accountable Care Organizations (ACOs) • Provider Scope of Practice • Health Information Technology 	
--	--	--
